## TRACK HEADS FROM LITON LIGHTING

Liton Lighting, part of the EEMA Group, offers a range of track lighting solutions to fit a variety of project applications. Liton has different styles of track heads, ranging from 420 lumens to 6,000 lumens.

The Apollo trackhead is a standard option perfect for general illumination and is available in 1100, 1500, 2900 and 4500 lumens. The series features an adjustable beam and is available in black or white finishes. Many Apollo trackheads are on the quickship program, making them a great option for quick-turnaround projects.

The Saturn trackhead is a distinctive metal trackhead with a variety of decorative shades to make a statement in retail and restaurants. The series features a mix of metal textures and glass shades for a uniquely-modern look. The trackhead provides 720lm and is available in 3000k.

The Solo trackhead is an architectural option designed for projects that require multi-circuit switching of 277v. The Solo is ideal for retail and showroom environments and is an idea replacement for HID, MR16 and CFL trackheads. The series is available in four ranges (0-14deg, 15-35deg, 36-50deg and 50+deg), and comes in 3000k and 4000k.
